Smith Drug Co.

We were recently informed by our supplier of Sure Anti-Perspirant SKU SUU71794 that some of the units it provided to us included a drug active ingredient that is different from the drug active ingredient identified on the product's label. In other words, the products we received from the supplier contain an approved active ingredient within the FDA approved amount, but not the approved, active ingredient on the label. It is important to note that the drug active ingredient used in the mislabeled products is a common, monographed anti-perspirant active ingredient, just not the one indicated on the product's label. Nevertheless, out of an abundance of caution, we are conducting a voluntary market withdrawal of the mislabeled units.

To that end, our records indicate that a maximum of 12 units of the mislabeled product were potentially shipped to you. The affected units are labeled with Lot Numbers 19277K2 and 197278K1. The lot number is visible on the outside of the products in full cases, and on the individual product's label as depicted in the photographs below (see attached examples). Accordingly, we respectfully request that you return any products marked with these lot numbers, at our expense, for a full credit. The Return Authorization Number and instructions are attached.
